### Lesson 5: Plotting Weather

**Purpose:** Plot on a map where you believe certain weather events occur.

**Guiding Questions:** No guiding question for this lesson.

**Directions.** Use the following colors to plot locations of weather events on this map. This will correspond to your large, group map.

- Orange: Tornado
- Green: Hurricane

Label each dot with a letter or number so you can keep track of which storm each dot represents.

Since hurricanes can travel long distances, plot the sticker at the origin of the hurricane and then use the marker to draw where the hurricane traveled.

Visit [7bscience.com](http://7bscience.com) and look at today's post for the locations of tornadoes and hurricanes.
